

I am an over the road truck driver for the past 32years and XM radio has provided me with more valuable information than the TV or FM radio. I drive from coast to coast. It is nice to have the local traffic and weather information at a touch of a button. It would be a disservice to the general public and the truck drivers to take this service away. We pay for this service just as we pay for cable or satalite TV in our homes.

So I think the government has over stepped their bounds on more time in this matter.

We the people have the right to have this service.
